Anybody know what a 1N2389 is? It is mounted on an octal tube base.
Only other number is 6611.

Hmmmmmm

Most of my info that would have any "1N" numbers in it goes back to about 1970. The only thing I can find with a similar number is a 50v 3a diode -- nothing in a tube can. The 6611 sounds like a date code -- a lot of electronic parts will have a similar code being year/week : 6611 could mean it was manufactured the 11th week of 66. Or it may mean something entirely different.

From: wb6zwc@ns.net

Subject: 1N2389

Message-ID: <199606301734.KAA14123@tomcat.ns.net>

Here is the general consensus is that a 1N2389 is a solid state replacement for a 5U4/5T4/5V3, etc. Most likely created in 1966.

"Silicon Rectifier, Peak Inverse Voltage 1600 Volts, Current 0.6 Amp, Max Surge Current 15 Amps, voltage drop 4.8, reverse current 0.5 ma"

'Silicon Rectifier

1600 V Peak working reverse volts

4.8 V Forward voltage drop

0.6 A Average forward current

0.5 mA Average reverse current

15 A Peak Surge current'

There were several more comments but I think the above describes the unit.

I suppose there are lots of these devices produced in the transition period from tubes to solid state.

Thanks guys!

Hmm... 1N2389 the 1968 Motorola Semiconductor Data book says:

Silicon rectifier, 1600 volts reverse, 4.8 volts forward, 0.6 amps forward, 0.5 ma reverse, 15 amps surge, no spec sheet published.

I'd guess your's was manufactured in the 11 week of 1966, thirty years ago!

The octal base kind of boatanchors it.

I still have a few of the 500KHz Collins mechanical filters used in the two filter modifications described in the March and June 96 issues of Electric Radio. The filter modification can be installed in the 51J-1, 51J-2, 51J-3, R388, and 75A-1. They are 3.5KHz wide, centered at 501.5KHz. I am asking \$50.00ea plus \$3.00 for priority mail.

For sale or trade for test equipment (see below), tubes--maybe...

Johnson Viking II TX, with the 122 VF0, original manuals. She's physically a 7.5-8 (best I've seen from these), and electrically excellent. The speech amp has been modified from stock (holes enlarged for 9 pin tubes) to a Ranger type circuit (12AX7 -> 12AU7 driver) with a different (bigger) driver transformer. Wonderful audio. All tubes checked, all electrolytics and wax/paper caps replaced. Loved dearly for years, but alas, too much for now.

Asking \$225 (what I paid 2 years ago), and would prefer local (Detroit area) pickup, but may ship if prepaid, etc..

I'd be very willing to trade for good ol' test equipment like a Tek scope (up to 30MHz is all I need, dual trace, probes), and/or an HP audio generator (HP200xx), HP410x AC voltmeter. You get the picture.

e-mail if interested!

From: n5off@w5ddl.aara.org
Subject: HF Contacts, Rig Survey
Message-ID: <405939@w5ddl.aara.org>

The post about the CQ magazine rig rackup reminded me that I racked up similar data a couple of years ago.

I went through my log, and found about 300 contacts in the recent past that had notes of the contact's rig type.

I have more specific data, but the Cliff's Notes version is this. The BA's will be obvious (although the Collins includes some 380's and military).

Make	%
AZDEN	0.4
CB	0.4
COLLINS	2.9
DRAKE	2.2
HOME BREW	0.4

HEATH	0.7
ICOM	17.0
JRC	0.4
KENWOOD	53.3
MILITARY	0.7
RADIO SHA	0.7
RANGER	0.4
RATHEON	0.4
SWAN	1.4
TEMPO	0.7
TEN TEC	1.8
UNIDEN	1.1
YASEU	14.9
	100.0

Kenwood 440 was the most common seen.

This data was taken before I participated in the Collins Net, and was mostly on 10, 15, and 20 meters. 75 meters and 160 meters may very well show many more BA's.

FWIW

Message-ID: <9606300111.AA21496@netman.ENS.TEK.COM>

Gang,

Thanks for the info on the price of one of these beast. Sounds like \$500-800 is usual range. Got me looking into this one for less but right now got to save my buck for buy a house and selling the one I got. All this is in the works and should come off in the next month or two and then if this KWM-2 is still around I'll probably pick it up.

Been working on another Collins, 51J-3/R-388 that the VFO doesn't operate. 500KC IF on is fine but nothing getting to the mixer in front of it and appears to be the VFO. This is one tank of a radio and probably beyond my technical ability but I'll keep tinkering with it to see if I can get it going. Anyone ever remove the sealed VFO in one of these? I shutter to think about it right now. Looks like it could be a nightmare getting the mechcanical monstrosity back together again.

The mixer V106 6BE6 has got no signal on pin 1 from the VFO. Pin 1 +0.2V(not -.2), 2 +2.4, 3 0V, 4 6.0VAC, 5 +205V, 6 +69 (not +82), 7 0V. The voltages on V110 and V116 are fine. Anyone got some ideas?

Subject: Naval Academy BA Antennae?
Message-ID: <199606301547.JAA04635@lynx.csn.net>

Hello all...

Last week, I was on the East Coast for several days and managed to take an hour or so off from work to wander about at the Naval Academy in Annapolis for a first time visit.

Question: There is a huge antenna farm very close to the campus -- lotza LONG wires suspended between 800-1000' tall towers that look like the "sparking tower" on the old RKO B/W movie leaders (you know -- the ". - ., -. -, ---" or whatever). These things appear to be circa 1928 and are/were, I assume, used to "communicate with ships at sea". Does anyone know what they are/were. Are they still in use. History thereof? They are clearly VLF or thereabouts.

Just curious. (They are, BTW, quite beautiful -- at least to my eye).

Regards

Jack, KC0LR (Friend to all things Hammarlund)

We have several different brands of relay racks where I work and they require several different thread sizes. Finding the chrome head screws isn't easy at a hardware store. Flat head screws with cup washers make a nice looking installation. Just take a sample of the screw to the hwd store.

Most standard racks use 10-32 screws. There are some that use 10-24 threads, however. Then the third type just has holes that require the use of clips that are threaded that you slip over the holers.

Thanks bill and i hope you can use all the tubes you goy. The reason i'm copying the whole crew is as follows. In the last couple of weeks there have been horror storys from people relating to being scamed on the internet. Let me tell you how it is on the other end. I recently had around 40 boxes of tubes to dispose of from my dads estate. Most of these sold for around 20 to 30 dollars a box. The shipping on what i've sent out so far has cost me over \$200.00. I'm not complaning as i wanted these

tubes to get in to the hands of people that would use them. I never attended to make a profit. I think all that have received there orders will agree that they more then got there moneys worth. I still have around 15 boxes waiting to go out. The biggest problem that i have now is people send me money orders or checks that do not match there e-mail name or address in anyway. Then they donot even tell me what they are buying! After each person agreed to purchase a given box i responded back immediatley asking for ther snail mail address. I sent out quite a number with out ever receving payment. I still do not know who belongs to the boxes that i have left. I learned one important lesson from this. If i ever have a large lot like this again to get rid of or if the others dont sell they are going in the trash! I don't like the remarks made as if i were trying to do someone in! 73 K6KWQ (former WA6JOX) and never WA6JOC

Well, I appreciate your efforts....I received one of your first boxes of tubes and I am certainly pleased. A note here for everyone who buys from someone on the BA list, I make it a point to send a copy of the e-mail describing what I have bought with my address on it to the seller. This is a reminder of the products bought as well as the terms. In my old age, the brain cells don't work as well as they used to so I make plenty of allowances for both myself and the person at the other end of

a deal.

thanks,
Phil

One of the things I always try to do is enclose a copy of the transaction where the "deal" was agreed upon. This piece of e-mail usually states the price, terms, address, etc., which should help prevent misunderstanding. I can say that I've never had a bad transaction from BoatAnchors or rec.radio.swap.

Richard, I thank you for making the tubes available and hope you realize that some of us do appreciate your efforts. I know how much time it took to individually wrap each tube, box 'em up, conduct the individual transactions and then take the boxes to the Post Office.

One suggestion, if you don't want to deal with the list at large again, is to offer any left over lots to those who bought similar batches of tubes. Assuming that others are as satisfied as I am, they'll likely view it as a lower risk proposition now. It'll keep you from having to throw anything away and should be considerably less of an ordeal for you.

For what it's worth, I've never seen folks on BoatAnchors so concerned about

bad transactions as they've been recently. The bad deal that happened a week or so ago followed by the 1L6 scam currently in progress on rec.radio.swap has gotten people a little bit testy. I hope you'll view the transactions in this light and cut BoatAnchors listmembers a little slack. I've found them a pretty decent bunch to deal with.

>... 73 K6KWQ (former WA6J0X) and never WA6J0C

Congratulations on the new call, Richard. I assume it was your Dad's.

I ordered two boxes on two different days from him, they both arrived the same day, and I'm sure he hadn't received my second check by the time he shipped them. I also enclose a copy of the e-mail describing the items I want in a deal, as well as including a pre-made address label for the seller to slap on the box. I was VERY happy with the tubes I got from this gentleman. I suspect he just hasn't gotten to shipping yours yet.

Still looking for the right Collins KWM-2A transceiver. The radio I'm
looking for should be ROUND emblem, with plug in relays, in 9+ condition. If
you have one of these radios or know of one for sale, please advise price and
condition. Elliott Klein, (602) 991-0575 or e-mail: CADV16@AOL.COM Thank
You!

Subject: WTB: KWM-2, 30L1, 51S-1 Cabinet or Junker
Message-ID: <960630154239_75301.3141_GHI82-2@CompuServe.COM>

In the post I sent earlier today, I made the erroneous assumption that my 51S-1
would fit in a standard S-Line cabinet. Kim Herron quickly and correctly
pointed out that I need the larger KWM-2/30L-1 cabinet and either one would need
a mod to the rear panel. Next time I will measure instead of making a silly
assumption.

Based on that, I am now looking for a KWM-2/2A, 30L-1 or 51S-1 cabinet or a
junker unit with a cabinet.

Thanks,

Mark

At a recent Collins employee test equipment sale, I picked up a rack mount 51S-1. I would like to put it in a desk top cabinet. If you have an extra cabinet, or a whole junker S-line set with a cabinet for sale, let me know.

Thanks,

Mark

I'm looking for a Signal Corps TL-29 Lineman's Knife to go in the maintenance kit of my GRC-109. Anybody got any ideas where to look?

I hope component parts of boatanchor sets are close enough to the purpose of the list to not get me in trouble!
